Logout from the Runtime doesn't work

Affected versions

- 15.10
- 15.10.1

Problem

In the affected versions, logging out from the runtime doesn't work properly. When performing requests to the HTTP session after logout, the runtime assumes the previously logged in user is still logged in.

Solution

This issue has been fixed and released in Blueriq versions 15.10.2. Please don't use any of the affected versions in production, but use 15.10.2 or newer.
