BMA rule: Exposed flows should have role(s) assigned

Explanation

This rule detects if exposed flows have roles set to them. This in order to require users to have to login in the application. In case of DCM application where exposed flows are mapped to process tasks, the combination of task, flow and role is checked.

Possible improvements

Set a role to the Exposed flow.

Example

For this flow 'ExposedFlowWithoutRole' no role was assigned and the flow was set as exposed.

< >	ExposedFlowWithoutRole in Care4Less →		🗙 English (U 👻	₽
		Properties Dependencies		
Ð		Documentation		
		Functional name Description		
		Flow		
		Flow type		
		Z Exposed		
		Roles		-

This results in the following issue:

 Found an issue with Exposed flow 'Exposed FlowWithoutRole': it doesn't have a role set to it and therefor doesn't require a 2 minutes ago ▼ L1 % ▼

 user to login, which is not secure.
