Blueriq tutorial, in Dutch

A Language

This tutorial is only available in dutch for now. If the need for an English version is very urgent, please contact us.

Part	Description
1	In this part we show Blueriq Studio. We model a first simple application and we view it in the Runtime.
2	The model is expanded; A domain is added and placed on a page in our application.
3	We expanded the model again. A decision is modeled whether someone is eligible for certification or not.
	The tutorial is only available on the Blueriq Academy website, because of the size of the files.
	On the upside, you can find lots of other interesting stuff there!
	Scroll down to "Over Blueriq".
