

# Contribution Style Commits

This page is relevant to you when you are planning to contribute to the Blueriq Material theme.

The new Blueriq Material theme based on [Angular](#) is planned to be opensource and published on GitHub (GitHub is the largest software development platform for opensource projects). Because we want the open source community to contribute to this project we want to commit ourselves to the contribution style commits supported by GitHub and used by Angular itself. This way we try to ensure that the threshold for contributing is as low as possible.

In order to understand the summary below you need to read the [Commit Message Guidelines](#).

## Summary commit guideline Blueriq Material theme

If we commit changes we would like to use the guidelines that are market standard, because the code will be open source.

The format we will using is:

```
<type>(<scope>): <subject> #<BQ0000>
<BLANK LINE>
<body>
```

\* The **header** (first line of the message) is mandatory and the **scope** of the header is optional.

Since we need an reference to our internal issue tracking system we provide the issue number at the end of the subject in the commit message. The internal issues are prefixed with #BQ-.

The commit message could look like this:

**fix(button): primary color #BQ-0000**

**Buttons should have the primary color and they should have some spacing**

The following types and scopes can be used (these are the default Types and Scopes as defined here: <https://github.com/angular/angular/blob/master/CONTRIBUTING.md#type>):

Type	Scope
build	animations
ci	common
docs	compiler
feat	compiler-cli
fix	core
perf	elements
refactor	forms
style	http
test	language-service
	platform-browser
	platform-browser-dynamic
	platform-server
	platform-webworker
	platform-webworker-dynamic
	router

service-worker
upgrade
