8. Runtime cluster limitations

1. Clustering is supported only for Forms and DCM Case Modeling applications. Applications which directly use processes or dashboards with flow widgets are not yet supported
2. Clustering is supported only in production environments. The Development Tools Component is not supported in a clustered Runtime.
3. Blueriq provides support for storing HTTP sessions in a Redis instance, everything stored in the HTTP session should be serializable.
4. Keeping large objects on the HTTP session/in the profile will result in a slow application.
