

Contribution Style Guide

This page is relevant to you when you are planning to contribute to the Blueriq Material theme.

For the development of the Blueriq Material theme, we adhere to certain code standards:

Typescript

We use `tslint` for checking the Typescript code. You can invoke `yarn tslint` in the root of the project to check all Typescript files. This should yield no errors.

SCSS

We use `sass-lint` for checking the style of the SCSS files. You can invoke `yarn sass-lint` in the root of the project to check all SCSS files. This should yield no warnings or errors.

HTML

There is no suitable tool to check Angular HTML Templates.

Online resources

Angular's website has a style guide that states a lot of good practices: <https://angular.io/guide/styleguide>
